Not tested

Method & files

01 Scorecard

Passed / checked. Bar colour: green 90% and up, amber 60-89%, red below 60%. Anything not checked is listed under Not tested, never counted as a pass.

Links working

389 / 389 **100%**

356 internal, 33 external. 12 more external links (6 Weedmaps, 5 Yelp, Facebook) return 400/403/406 to automated clients, so they count as not tested. One internal product link gave a 403 during the crawl and returned 200 on re-check at 12:55 PM PT.

Images loading whole

1629 / 1635 **100%**

6 product images on Amazon S3 return HTTP 403 ([M-13](#)). 894 lazy images never scrolled into view are not tested. UserWay widget images are excluded.

Images with alt text

1029 / 1111 **93%**

Visible, non-decorative images only. The 82 without alt: 67 /shop product cards, 10 location thumbnails, 4 footer icons, 1 footer logo ([L-10](#)).

Pages without console errors (ignoring AlpineIQ rate-limit errors)

95 / 95 **100%**

The made-up 404 URL is excluded; its only error is its own 404.

Pages without console errors (all errors)

8 / 95 **8%**

87 pages log AlpineIQ "429 / exceeds 1/req per minute" errors from the VIP pop-up. The crawl's own request rate caused these, so they are not listed as a site issue.

Pages under 3 s (desktop, nav start to load, 1st sample)

10 / 96 **10%**

Median 3203 ms, slowest 4850 ms. A 2nd, sequential sample (one fresh browser per URL, finished 1:10 PM PT) gave 7/96 under 3 s, median 3170 ms, slowest 3850 ms.

Pages without mobile overflow (390x844)

96 / 96 **100%**

Buttons that do what they should

39 / 40 **98%**

Crawl click tests on 16 templates, desktop and mobile. 1 fail: tapping a mobile filter's label text does not tick the box ([L-7](#)). Three first-pass failures turned out to be test-selector errors. They were re-run with correct selectors and passed.

Customer journeys completed

17 / 20 **85%**

3 failed: J05 sort, J14 loyalty, J21 guest bag kept after login. **Not tested:** 2 (J08 variants: no variant picker; J20 VIP signup: needs a real mobile number and a drawn signature). 11 of the 17 passes had friction.

Price consistency: card / product page / bag / checkout

4 / 4 **100%**

1 product (Alien OG - Smalls, Melrose): \$79.41 on the card, product page, bag line and checkout line. Math also correct: qty 2 = \$158.82; \$79.41 + \$7.54 + \$13.04 = \$99.99 To Pay.

Same price before and after choosing a store

6 / 17 **35%**

17 product names that appear exactly once on /shop before and after choosing Melrose. 11 change, e.g. Strawberry Jam \$7.94 to \$11.91 ([M-1](#)).

Forms that submitted successfully (of those actually submitted)

6 / 6 **100%**

Sign-up, email code verification, email + password login, one-time-code login, forgot-password request, set new password from the reset link. Intentional validation tests (empty submits, password mismatch, invalid promo code) are not counted. Contact, wholesale and VIP forms were not submitted.

HTTP status as expected

96 / 96 **100%**

95 pages return 200; the made-up URL returns 404 as it should.

Sampled product pages that render name and price

60 / 60 **100%**

6 of the 60 show the placeholder category "Root category" ([M-10](#)).

Sitemap product URLs containing "#" that render a product

0 / 10 **0%**

98 of 8554 sitemap product URLs contain an unencoded "#"; all 10 sampled open an empty product page ([M-9](#)).

All check rows (crawl + buttons + links + price + journeys + re-verification probes)

1027 / 1274 **81%**

1290 rows in all_checks.csv: 1027 pass, 247 fail, 16 not tested (not counted). Includes one probe row per issue from the re-verification.

Other facts from the journeys: home page to checkout step 2 took 7 clicks after the age gate (choose location, pick store, open product, Add To Cart, Checkout, email code, Next). A store must be chosen before anything can be added to the bag. Signing up requires a phone number.

02 Scope

SITE

www.thecurecompany.com (Webflow front end with the Batch commerce plugin, behind Cloudflare). It sells cannabis for in-store pickup at 6 Los Angeles dispensaries.

WHEN

Sunday 2026-09-27. Recon 12:18-12:29 PM PT, crawl 12:30-12:51 PM PT, journeys 12:29-1:07 PM PT, button tests 12:46-1:05 PM PT, re-verification 1:07-1:32 PM PT.

HOW

Crawl of 96 URLs with headless Chromium (Playwright) at desktop 1366x900 and mobile 390x844, plus python-requests for links and headers. The 96 URLs are the 27 non-product sitemap pages, 6 categories, 1 search, /checkout, 1 made-up 404 URL and a seeded sample of 60 of the 8554 sitemap product URLs. Journeys also ran in Playwright Chromium, on desktop and at 390x844 for mobile. Test account: a throwaway mail.tm test inbox (address withheld) and the reserved fictional phone 213-555-0147. No test card was provided and Place Order was never clicked, so checkout stopped at step 2 (Identification). Nothing was ordered, no messages were sent and no reviews were posted.

RULES

every number below comes from pages.csv, links.csv, images.csv, journeys.csv and the check rows in all_checks.csv. Anything not checked is listed as not tested, never as a pass. Secrets are redacted.

30 distinct issues: 1 Critical, 4 High, 15 Medium, 10 Low. Re-verification (1:07-1:32 PM PT): 29 still reproduce, 0 were incorrect, 0 were fixed since the first test, and 1 could not be rechecked (**H-4** , needs a second phone number); it is kept and marked.

03 Severity summary

05 Usability analysis

Written from the point of view of a shopper who wants to get from "I'd like to pick up some flower at Melrose" to "order placed, points earned" with as little effort as possible. Steps follow the order a shopper meets them. Each point says what slows the shopper down and gives a concrete fix.

1. Arrive

- **Two pop-ups before the first product.** A new visitor gets the age gate plus the "Sign Up For VIP Deals" form layered on top of it. The visitor has to close a marketing form before they can even confirm their age; the pop-up sits on top of the YES button (**M-6**). *Fix:* show the age gate alone. Offer VIP sign-up later, e.g. after the first add to bag or in the footer.
- **The cookie text is not accurate.** The age gate says "we never collect any personal data", yet ad-tech cookies (doubleclick, quantserve, sitescout, exelator, crwdcntrl) are already set before YES is pressed, and there is no accept/decline choice (**M-15**). *Fix:* load trackers only

after consent and give a clear accept/decline choice. At the very least, reword the notice so it matches what the site does.

- **Slow first paint.** Only 10 of 96 pages finished loading in under 3 s in the first sample; the median is about 3.2 s ([M-12](#)). *Fix:* defer the 29 plugin scripts and third-party tags, and load only the scripts each page needs.

2. Choose a store

- **Nothing can be bought until a store is chosen, and the site doesn't say so.** Before choosing, every card says "Check Availability", and some prices change once a store is picked: 11 of 17 products changed price, e.g. Strawberry Jam \$7.94 to \$11.91 ([M-1](#)). The shopper sees one price and then pays another. *Fix:* ask for the store on arrival, or label pre-store prices as "from" prices and say that prices vary by store.
- **Store names look like code.** The picker lists "The-Cure-Company-Melrose" and "CCC-by-The-Cure-Company" ([L-2](#)). *Fix:* show readable names ("The Cure Company - Melrose") with the address and opening hours.

3. Find

- **No sort.** There is no way to sort by price, potency or newest on category or search pages ([M-3](#)). A price-conscious shopper has to scroll through 315 flower products. *Fix:* add a sort menu (price low-high, high-low, THC, newest).
- **Filters are messy.** "Pre-Rolls" and "Pre-rolls", "Pre-Roll" and "Pre-Rolls" appear as separate subcategories. Other filters include "Root category" and a brand called "Custom Brand". Sizes are not in numeric order, and pre-rolls turn up under Flower ([M-10](#)). Filtering does work (Indica 315 to 62). *Fix:* clean the category and brand data at the source and sort sizes numerically.
- **Mobile menu has no Shop link.** The hamburger menu lists Brand, Locations, Genetics, Wholesale, About Us and Contact Us, but not Shop, and BRAND points at the bare domain, which redirects ([M-7](#)). *Fix:* put Shop first in the menu and link BRAND to the www URL.
- **Tapping a filter's name does nothing on mobile.** On mobile only the small checkbox toggles; tapping the word "Indica" does nothing ([L-7](#)). *Fix:* wrap each checkbox and its text in a `<label>`.
- **Search works.** "alien og" found 10 results, and a nonsense query shows "No Products Found". The empty state still lists brand filters, though.

4. Choose a product

- **The product page leaves out what cannabis shoppers compare on.** There is no size or weight picker, no THC/CBD percentage and no quantity selector before adding. Two cards can share one name at different prices with no size shown, e.g. "Alien OG - Smalls" at \$79.41

and \$142.94 ([M-11](#) , [M-10](#)). *Fix*: show weight, potency and strain type near the price, and one product with a size picker instead of look-alike cards.

- **Broken images.** 6 product images return 403 from S3 ([M-13](#)), and related products are a generic list. *Fix*: re-upload or re-permission the images and show a placeholder when one fails.

5. Bag

- **The bag total doesn't say what it is.** After adding a \$79.41 item, the bottom bar shows "\$99.99" with no label. That figure is the total including sales and excise tax, and the product page never mentions tax ([M-2](#)). *Fix*: label it "Total incl. tax \$99.99", and add "plus sales and excise tax" under the product price.
- **Accessibility button on top of Checkout.** On mobile the UserWay icon sits on the right end of the sticky Checkout button ([M-8](#)). *Fix*: move the widget up or to the left on pages with the sticky bar.
- **Your bag disappears when you log in.** A guest who fills the bag and then logs in (as checkout invites) finds it empty ([H-1](#)). This is the most costly flaw for a shopper. *Fix*: merge the guest bag into the account bag on login.

6. Checkout

- **Promo codes only for members, and errors vanish.** Guests see no promo field. Logged in, an invalid code shows "Invalid or expired promo code" for about 3 seconds and throws a script error ([M-4](#)). *Fix*: offer the field to everyone and keep the error next to the field until the code changes.
- **Step 2 is unclear.** It asks for a Government ID and a Patient ID upload, yet Place Order becomes enabled at this step before either is given, and there is no pickup time or payment method on the page ([M-5](#)). A shopper can't tell what is required, when to pick up or how to pay. *Fix*: mark which fields are required (Patient ID for medical only), explain "pay in store at pickup" if that is the model, and offer a pickup time.
- **Hidden warning link.** The Prop 65 warning link is black text on a black background ([L-1](#)). *Fix*: use a visible link colour.

7. Join, verify, rewards

- **Sign-up works but needs a phone number and a code.** The code email's subject says "one time code to login" even at sign-up, and the welcome email arrives before the account is verified ([L-6](#)). *Fix*: separate sign-up and login templates, and send the welcome email after verification.
- **The wrong error for unverified accounts.** Logging in before verifying shows "Invalid email or password" while the server says "Please verify your account first" ([H-4](#)). The shopper

thinks they mistyped and may reset the password for nothing. *Fix*: show the server's message with a "send me a code" button.

- **Loyalty exists but members can't see it.** The account is flagged as a loyalty member and the program has tiers, but the profile shows no points or tier, and /rewards and /loyalty are 404 ([H-3](#)). *Fix*: show the points balance and tier in the header and profile, and add a rewards page.
- **VIP deals need a phone and a signature.** The only newsletter is the AlpinelQ VIP form. It requires first and last name, mobile phone, favourite store and a drawn signature, and its SMS/autodial consent box sits below the Sign Up button ([M-6](#)). Most shoppers will stop at the phone field. *Fix*: email-only sign-up with SMS as a separate opt-in, and put the consent box above the button.

8. Account security

- **Password reset links never expire and can be reused ([SEC-1](#)).** A reset link keeps working after it has been used, even hours later, and the token has no expiry. Anyone who gets hold of an old reset email (a shared inbox, forwarded mail) can take over the account. The link in the email also has no https:// ([H-2](#)), so some mail apps treat it as a relative link and it fails.

Top 5 fixes, ranked by impact on a shopper

1. **Keep the bag on login ([H-1](#)):** merge the guest bag into the account.
2. **Make reset links single-use and expiring, and add https:// to the link ([SEC-1](#) , [H-2](#)).**
3. **Show loyalty points and tier to members ([H-3](#)),** and give unverified users the right message ([H-4](#)).
4. **Make the price honest from the first view:** choose the store up front or mark prices as varying by store, and label the bag total as including tax ([M-1](#) , [M-2](#)).
5. **Make checkout step 2 clear:** required fields, pickup time, how payment works, and Place Order enabled only when ready ([M-5](#)), plus a promo field for everyone ([M-4](#)).

06 Issues for developers

30 issues. Every failing row in all_checks.csv carries an issue_id and severity pointing to one of these. Crawl environment unless stated: desktop 1366x900 / mobile 390x844, headless Chromium (Playwright), 2026-09-27 12:30-12:51 PM PT. Journey environment: Playwright Chromium, 12:29-1:07 PM PT. Each card shows its re-verification.

CRITICAL

SEC-1

Re-verified ✓

Password-reset link can be reused after it has been used, and the token has no expiry

URL	https://www.thecurecompany.com/reset-password?passwordToken=[REDACTED]
ENVIRONMENT	desktop 1366x900, Playwright Chromium, 2026-09-27 12:40-12:50 PM PT; re-verified 2026-09-27 01:17 PM PT (still reproduces)
ELEMENT / SELECTOR	#reset-password-button (form on /reset-password)

STEPS TO REPRODUCE

1. On /forgot-password request a reset for a test account.
2. Open the emailed link, save password A.
3. Open the same link again, save password B.
4. Log in with password B (succeeds).
5. Decode the JWT payload in the link (claims only).

EXPECTED

A used link shows "link expired" and cannot change the password. Tokens are single-use server-side and carry a short exp (e.g. 15-60 minutes).

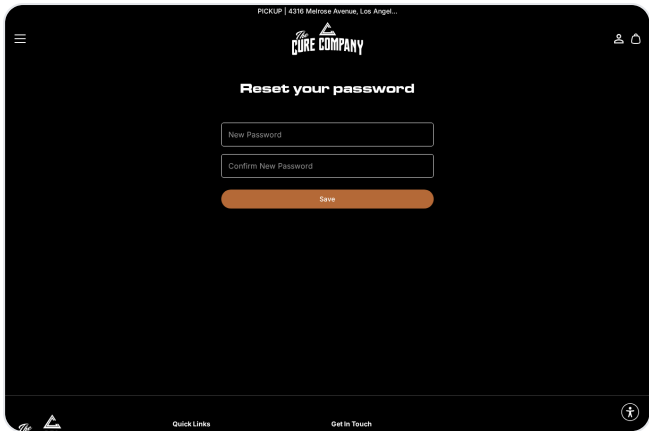

ACTUAL

The used link renders the form again and accepts a new password; login with it succeeds. The token payload is only {data, iat}, with no exp claim. Re-verified twice: a link that had already been used twice about 20 minutes earlier set a third password (1:09 PM PT), and a brand-new link requested at 1:17 PM PT accepted password A and then password B; login with B worked and A was rejected.

CONSOLE	none relevant
NETWORK	POST customer-backend-production.batchsys.com/api/v1/changePassword/<token> -> 200 on every submit (token redacted)
LIKELY CAUSE	The token is validated by signature only. It is never marked as used, never tied to the current password hash, and never expires.
CHECK ROWS	1 failing row in all_checks.csv (C1287)

Re-verified · 2026-09-27 01:17 PM PT: Fresh reset requested 2026-09-27 01:17 PM PT (email received 2026-09-27 1:17 PM PT). Link opened, password A saved (HTTP 200); the SAME link

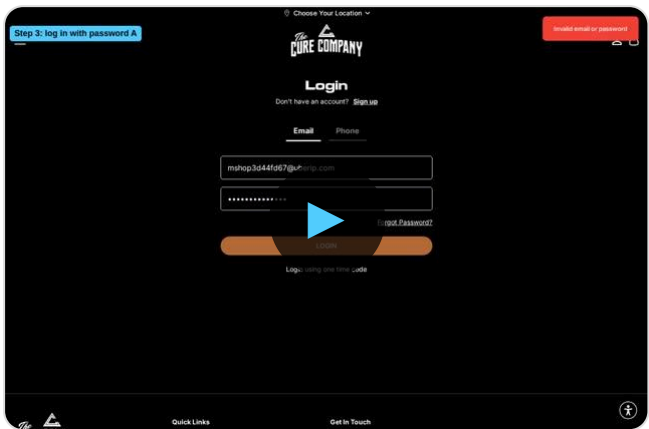

opened again and password B saved: HTTP 200, success=True. Login with A: False; login with B: True. Token claims ['data', 'iat'], exp present: False. Also: a link already used twice at ~12:50 PM PT set a third password at 1:09 PM PT.

HIGH High / broken customer path 4 issues · 5 failing check rows

HIGH H-1 Re-verified ✓

Guest bag is emptied when the shopper logs in

URL <https://www.thecurecompany.com/checkout>

ENVIRONMENT desktop 1366x900, Playwright Chromium, ~12:45 PM PT; re-verified 2026-09-27 01:14 PM PT (still reproduces)

ELEMENT / SELECTOR bag / #cart-item-container

STEPS TO REPRODUCE

1. As a guest, choose the Melrose store and add Alien OG - Smalls to the bag.
2. Open /checkout (item listed).
3. Log in with email and password.
4. Open /checkout again.

EXPECTED

The guest bag is merged into the account bag; the item is still there.

ACTUAL

The bag is empty after login. The console logs "Error syncing bag ... totalItemsInCart". Re-checked twice with products that were not in the account's saved bag: Strawberry Jam (1:14 PM PT) and Mount Zereal Kush (1:15 PM PT). Both were listed at guest checkout and both were gone after login; the second time checkout said the cart was empty. An earlier re-check at 1:12 PM PT looked as if the bag was kept, but the item shown was not the guest item, so it did not count as a fix.

CONSOLE

Error syncing bag: TypeError: Cannot read properties of undefined (reading 'totalItemsInCart') at global.js:3930:21 ; Error syncing bag: TypeError: Cannot set properties of null (setting 'textContent') at updateOrderSummary (checkout.js:4259:59)

NETWORK

POST customer-backend-production.batchsys.com/api/v1/syncBag after login

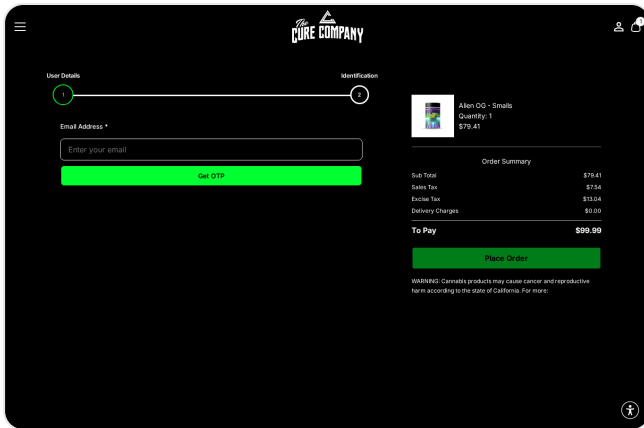

LIKELY CAUSE

The bag sync after login replaces the local guest bag with the (empty) server bag, and fails on an undefined response field.

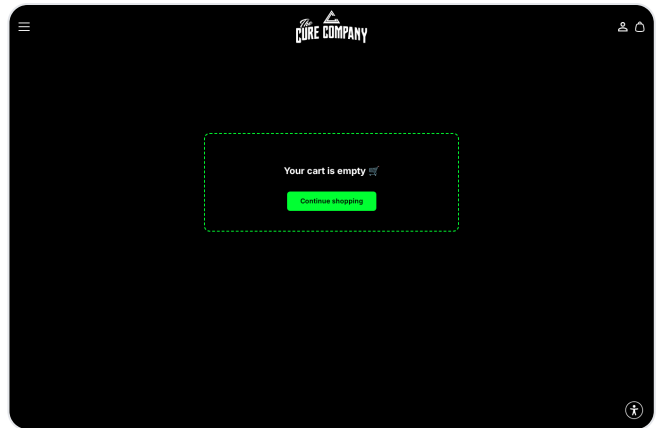

CHECK ROWS

2 failing rows in all_checks.csv (C1259, C1271)

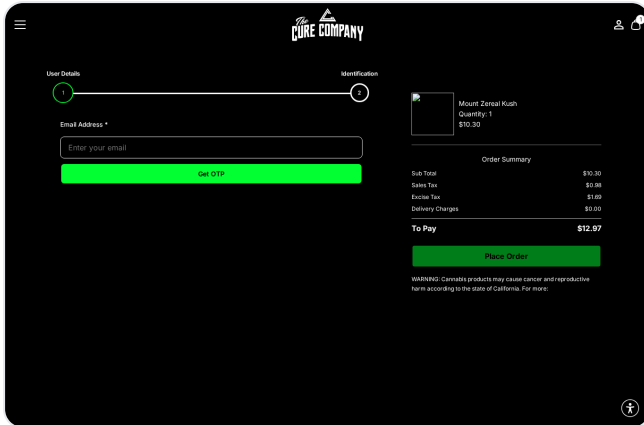

Re-verified • 2026-09-27 01:14 PM PT: Guest added Strawberry Jam (not in the account's saved bag) and it was listed at checkout: True. After logging in (success=True) checkout lists Strawberry Jam: False; Alien OG (the account's saved bag): False. Console: ["Error syncing bag: TypeError: Cannot read properties of undefined (reading 'totalItemsInCart')"].

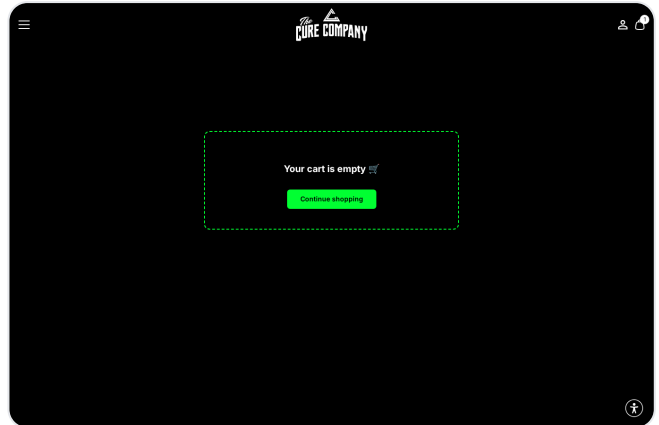

R1_guest_checkout_has_item.png

Password-reset email link has no https:// scheme

URL reset email from info@curecompany.com, "Request to reset password for The Cure Company"

ENVIRONMENT email HTML fetched from the test inbox; click demo in Playwright Chromium, 12:53 PM PT; re-verified 2026-09-27 01:17 PM PT (still reproduces)

ELEMENT / SELECTOR `<a href="www.thecurecompany.com/reset-password?..." target="_blank">`

STEPS TO REPRODUCE

- 1. Request a password reset.
- 2. Inspect the link in the email HTML.
- 3. Open the email HTML in a browser and click the link.

EXPECTED

`href="https://www.thecurecompany.com/reset-password?passwordToken=..."`

ACTUAL

`href="www.thecurecompany.com/reset-password?passwordToken=..."` (no scheme). A browser resolves it relative to the page showing the email: in the demo it opened `http://localhost:8765/www.thecurecompany.com/reset-password?...` and got a 404. Webmail and mail apps that don't guess the scheme will break the link.

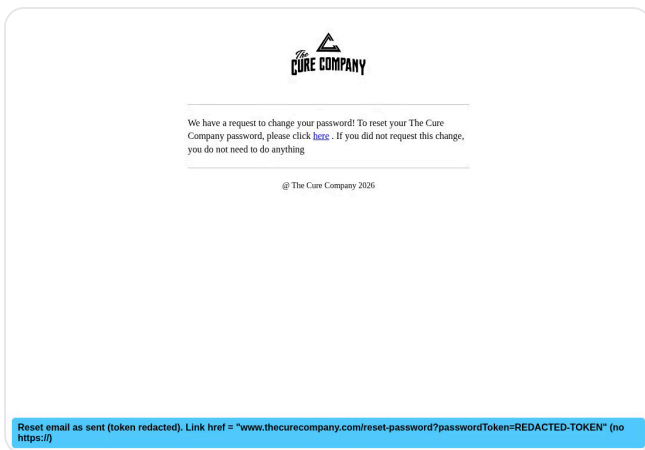

CONSOLE n/a

NETWORK n/a

LIKELY CAUSE The email template builds the URL from the host name without the protocol.

CHECK ROWS 1 failing row in all_checks.csv (C1288)

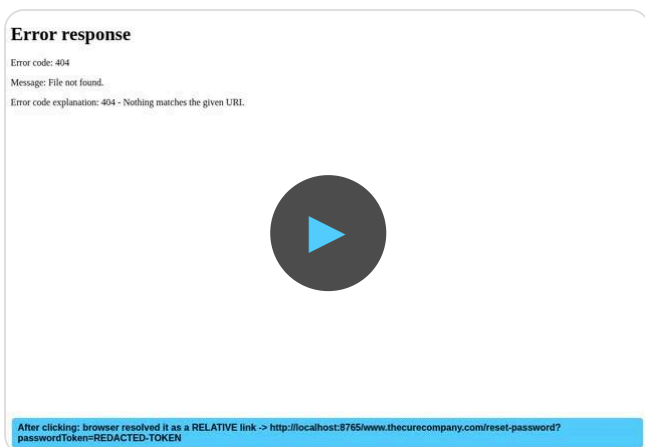

Re-verified · 2026-09-27 01:17 PM PT: Fresh reset email (2026-09-27 1:17 PM PT, from info@curecompany.com): link href starts "www.thecurecompany.com/reset-password" with no https:// scheme. Opened from a web page it resolves relative to that page (demo 12:53 PM PT: localhost/www.thecurecompany.com/reset-password -> 404).

Not rechecked (needs a second phone number)

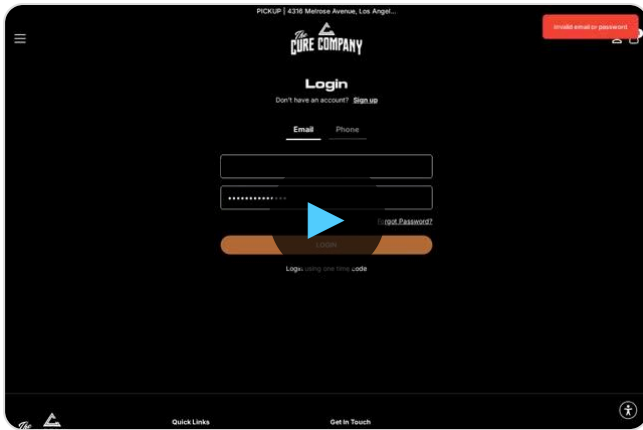

Unverified account login says "Invalid email or password"

URL	https://www.thecurecompany.com/login
ENVIRONMENT	desktop 1366x900, Playwright Chromium, ~12:32 PM PT (account not yet verified)
ELEMENT / SELECTOR	#login-submit-button; toast
STEPS TO REPRODUCE	1. Sign up and do not enter the emailed code. 2. Log in with the correct email and password.
EXPECTED	"Please verify your account first", with a button to send a new code.
ACTUAL	A toast says "Invalid email or password" for about 2 seconds. The API response says "Please verify your account first. Use OTP login...".
CONSOLE	none
NETWORK	POST customer-backend-production.batchsys.com/api/v1/login -> success false, message "Please verify your account first..."
LIKELY CAUSE	login.js shows a generic message for every failure instead of the server's message.
CHECK ROWS	1 row(s) in all_checks.csv (C1251), marked not tested

Not rechecked · 2026-09-27 01:18 PM PT: Needs an unverified account; the only test account is now verified and a second account would need another phone number. Evidence is the 12:3x PM PT video (unverified_login_shows_invalid_password): the UI said 'Invalid email or password' while the API answered 'Please verify your account first'.

Prices change after a store is chosen

URL `https://www.thecurecompany.com/shop`

ENVIRONMENT `desktop 1366x900, Playwright Chromium, 12:4x PM PT; re-verified 2026-09-27 01:17 PM PT (still reproduces)`

ELEMENT / SELECTOR `a.product-card price`

STEPS TO REPRODUCE

1. Open /shop in a fresh session and note card prices.
2. Choose Your Location, then The-Cure-Company-Melrose.
3. Compare prices for the same product names.

EXPECTED

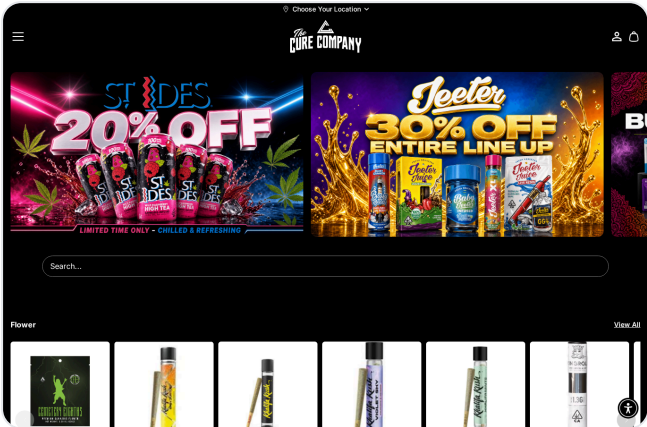

The price shown before choosing a store is the price the shopper pays, or it is clearly labelled as varying by store.

ACTUAL

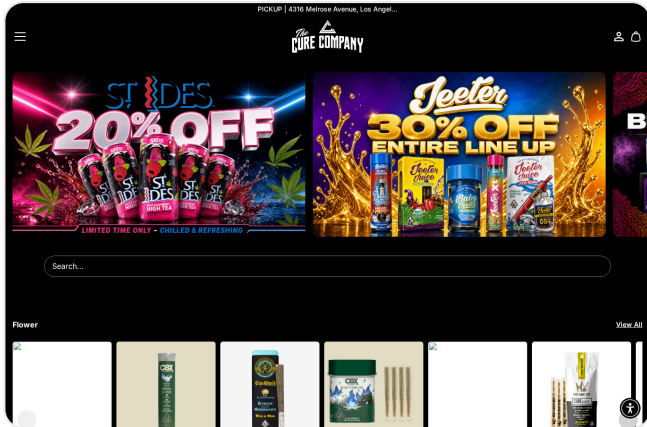

Of 17 product names shown once before and once after, 11 changed price, e.g. Strawberry Jam \$7.94 to \$11.91 and Kingroll 4-Pack \$29.31 to \$31.76. Re-check at 1:18 PM PT: again 11 of 17 changed; recorded on video at 1:32 PM PT (Strawberry Jam \$7.94 to \$11.91). Nothing on the page says that prices depend on the store.

CONSOLE	none
NETWORK	n/a
LIKELY CAUSE	Pre-store cards show a default or other-store price.
CHECK ROWS	12 failing rows in all_checks.csv (C1222, C1223, C1224, C1225, C1226, C1230 and 6 more)

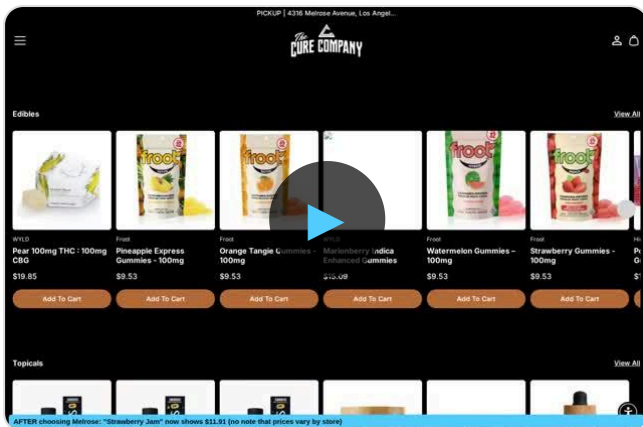

Re-verified • 2026-09-27 01:17 PM PT: /shop re-check: 17 product names appear once before and once after choosing Melrose; 6 keep the same price, 11 change, e.g. [('Top Shelf Cultivation - Whoa Si Whoa Preroll - 1 g', '\$8.71', '\$8.74'), ('Kingroll - 4-Pack Zoap x Permanent Marker Hybrid - 3 g', '\$29.31', '\$31.76'), ('Kingroll - Single Grandi Guava x Grapefruit Romulan - 1.3 g', '\$14.29', '\$15.88')].

Bag total is tax-inclusive but unlabeled; product page never mentions tax

URL <https://www.thecurecompany.com/product?slug=alien-og---smalls-the-cure-company-root-category-14-36924&productId=36924>

ENVIRONMENT desktop 1366x900, Playwright Chromium; re-verified 2026-09-27 01:13 PM PT (still reproduces)

ELEMENT / SELECTOR `sticky bottom bar (bag count, $ total, View Cart, Checkout)`

STEPS TO REPRODUCE

1. Choose Melrose and open the product page (\$79.41).
2. Click Add To Cart and read the bottom bar.

EXPECTED

"Total incl. tax \$99.99" (or the \$79.41 subtotal), plus a tax note near the product price.

ACTUAL

The bar shows "\$99.99" next to View Cart and Checkout, with no label. The difference is sales tax \$7.54 plus excise \$13.04. The product page does not mention tax.

CONSOLE none

NETWORK n/a

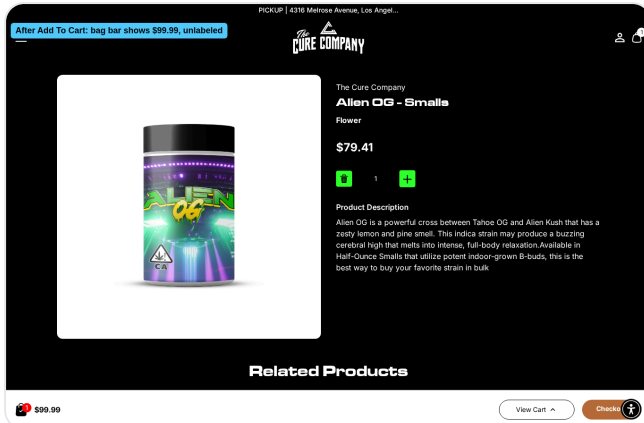

LIKELY CAUSE

The bar shows the "To Pay" total instead of the subtotal, without a label.

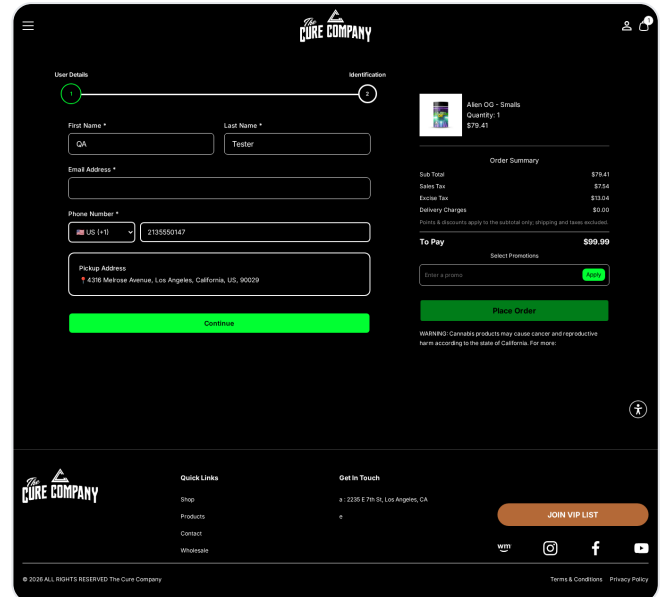

CHECK ROWS

1 failing row in all_checks.csv (C1270)

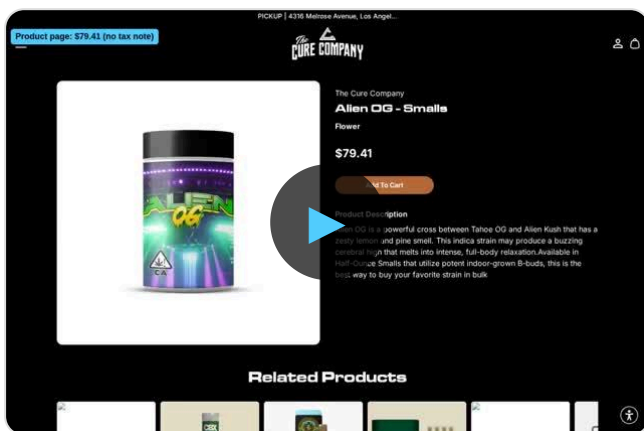

Re-verified · 2026-09-27 01:13 PM PT: Strawberry Jam product page (first price on page \$11.91); after Add To Cart the bottom bar reads "1 | \$15 | View Cart | Checkout" with no label. Product page mentions tax above Related Products: False.

Promo code: members only, error disappears in about 2 s, script error

URL

https://www.thecurecompany.com/checkout

ENVIRONMENT

desktop 1366x900, Playwright Chromium; re-verified 2026-09-27 01:24 PM PT (still reproduces)

STEPS TO REPRODUCE

- 1. As a guest, add a product and open /checkout: no promo field.
- 2. Log in, add a product, open /checkout.
- 3. Enter QATEST123 and apply.

EXPECTED

A promo field for everyone. An invalid code shows an inline error that stays until the code changes. No script errors.

ACTUAL

Guests get no field. Logged in, a toast "Invalid or expired promo code" appears at the top right and is gone within about 4 s (re-check 1:24 PM PT: visible from 0.75 s to 3.75 s after Apply). Nothing stays next to the field, and the page throws a TypeError on classList.

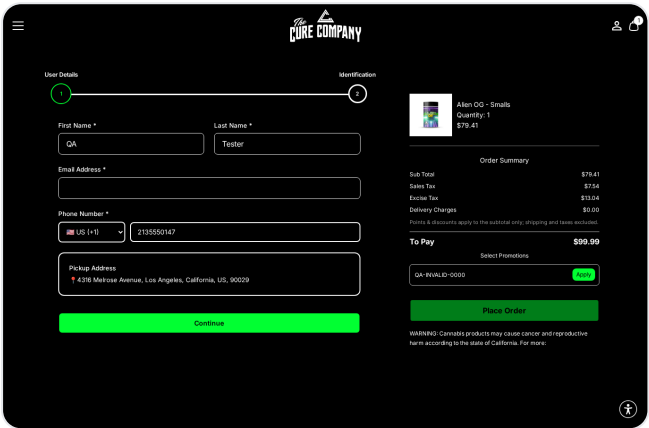

CONSOLE `pageerror: Cannot read properties of null (reading 'classList')`

NETWORK `promo validation request -> error response`

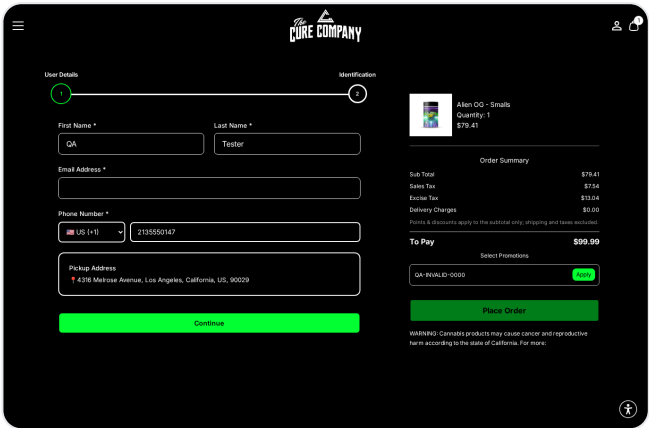

LIKELY CAUSE The promo UI is rendered only for authenticated users; the error handler references a missing element.

CHECK ROWS 1 failing row in all_checks.csv (C1284)

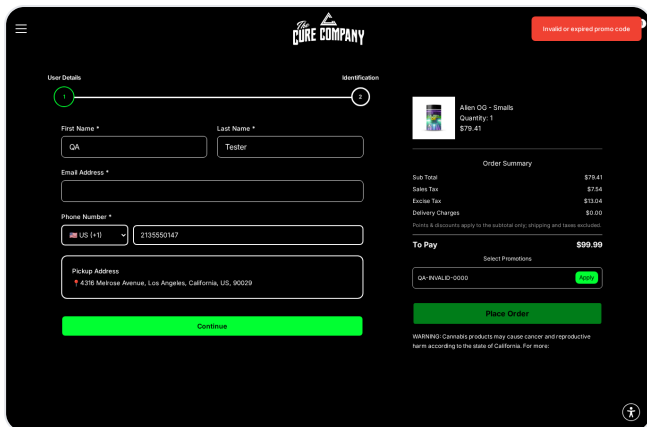

Re-verified · 2026-09-27 01:24 PM PT: Guest checkout promo fields: 0. Logged in: promo field present (1); entered QA-INVALID-0000 and pressed Apply: 'Invalid or expired promo code' visible from 0.75 s to 3.75 s after the click, then gone; no message next to the field; page error: ["pageerror: Cannot read properties of null (reading 'classList')"]. PUT explicitDiscount -> 200.

Checkout step 2: Place Order enabled without ID; no pickup time or payment info

URL

<https://www.thecurecompany.com/checkout>

ENVIRONMENT

desktop 1366x900, Playwright Chromium, logged in; re-verified 2026-09-27 01:12 PM PT (still reproduces) (Place Order was never clicked)

ELEMENT / SELECTOR

#place-order; Identification step (Government ID / Patient ID drop zones)

STEPS TO REPRODUCE

1. Log in, add a product, open /checkout.
2. Go to step 2 (Identification).
3. Look at the required fields and the Place Order button without clicking it.

EXPECTED

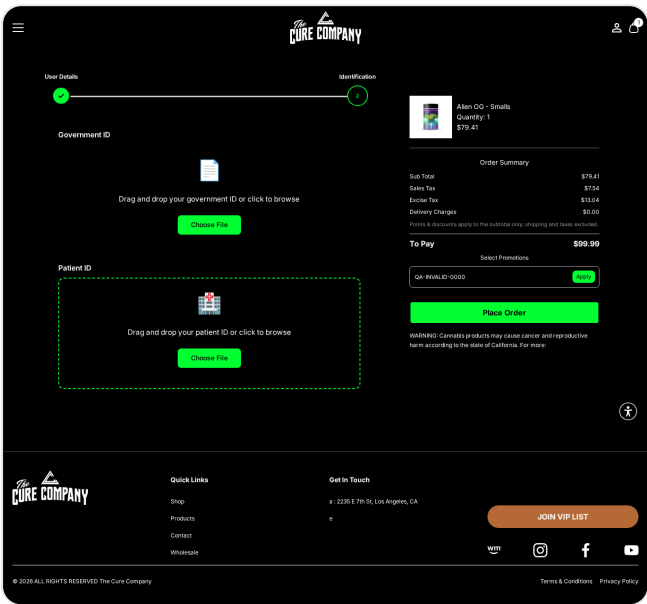

Required fields are marked, and Place Order stays disabled until they are filled. The page shows the pickup store and time and how payment works (e.g. pay in store).

ACTUAL

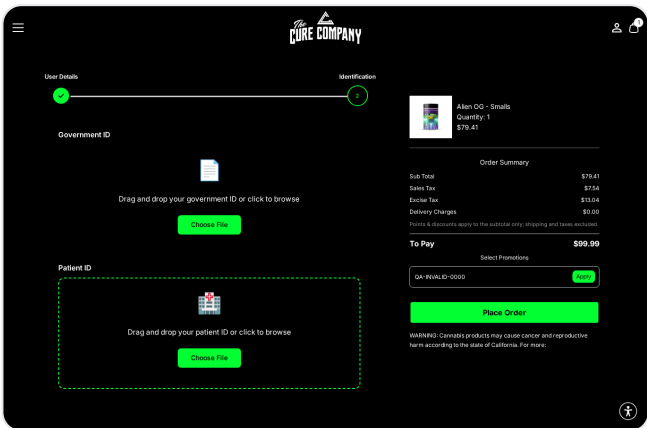

Step 2 asks for a Government ID upload and a Patient ID with no indication of which is required. Place Order (#place-order) is disabled at step 1 but becomes enabled at step 2 with no ID uploaded. There is no pickup time selection and no payment method or "pay at pickup" note.

CONSOLE	none
NETWORK	n/a (Place Order not clicked)
LIKELY CAUSE	Checkout template/validation incomplete.

VIP pop-up opens over the age gate and is the only newsletter; needs phone, signature and SMS/autodial consent

URL	https://www.thecurecompany.com/ (pop-up iframe lab.alpineiq.com/join/c/4413/109731)
ENVIRONMENT	desktop 1366x900, Playwright Chromium, fresh session; re-verified 2026-09-27 01:08 PM PT (still reproduces)
ELEMENT / SELECTOR	<code>#aiq-forms-container iframe; button.aiq-form-close-button</code>

STEPS TO REPRODUCE

1. Open the home page in a fresh session.
2. Note the "Sign Up For VIP Deals" form over the age gate.
3. Look at the required fields and the consent box position.

EXPECTED

The age gate alone on arrival. An email-only newsletter option, with SMS as a separate opt-in and consent above the submit button.

ACTUAL

The VIP pop-up opens on top of the age gate. It requires first and last name, mobile phone, favourite store and a drawn signature; email is optional. The SMS/autodial consent box sits below the Sign Up button. The footer "JOIN VIP LIST" opens the same form. There is no email-only sign-up.

CONSOLE

```
AlpineIQ 429 "exceeds 1/req per minute" on repeat visits (from its  
signupView call)
```

NETWORK

```
POST lab.alpineiq.com ... signupView
```

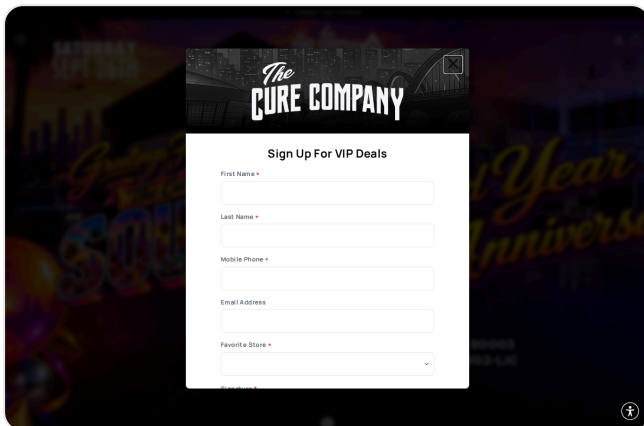

LIKELY CAUSE

AlpineIQ pop-up trigger set to "on load", with no check for the age gate.

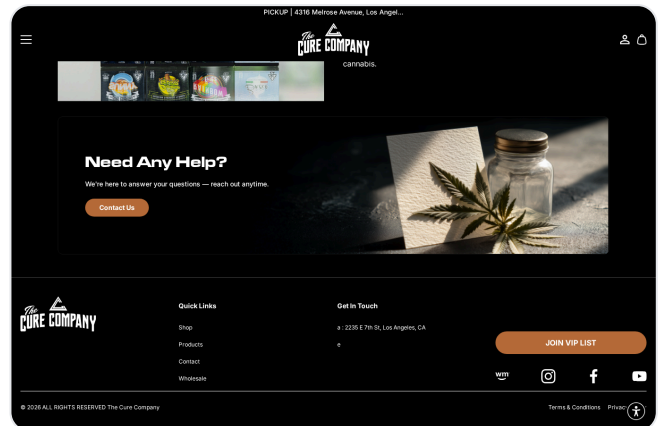

CHECK ROWS

1 failing row in all_checks.csv (C1290)

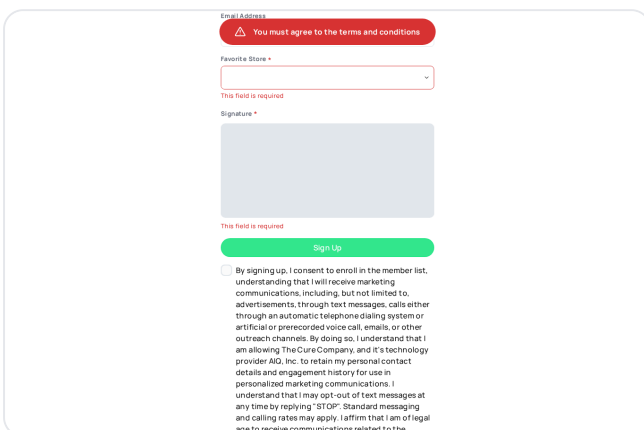

Re-verified • 2026-09-27 01:08 PM PT: Fresh session: the AlpineIQ 'Sign Up For VIP Deals' iframe (https://lab.alpineiq.com/join/c/4413/109731) is visible on arrival while the age gate is showing; document.elementFromPoint at the YES button returns the IFRAME, so the pop-up must be closed before YES can be pressed. Cookie notice says no personal data is collected, but ad-tech cookies are set before consent

URL

https://www.thecurecompany.com/

ENVIRONMENT

desktop 1366x900, Playwright Chromium, fresh session; re-verified 2026-09-27 01:17 PM PT (still reproduces)

ELEMENT / SELECTOR

#age-parent cookie text

STEPS TO REPRODUCE

1. Open the home page in a fresh session; do not press YES.
2. After about 10 s, list the cookies.

EXPECTED

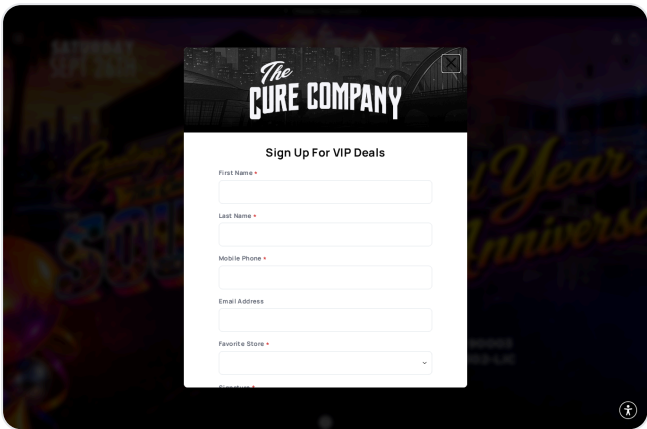

No advertising cookies before consent, or a notice that accurately describes them with accept/decline.

ACTUAL

The notice in the age gate says "we never collect any personal data". Before any interaction, cookies from doubleclick.net, quantserve.com, sitescout.com, exelator.com and crwdcntrl.net are set: 11 cookies in the first measurement (12:56 PM PT) and 14 at re-check (1:08 PM PT), 10 of them from those ad-tech domains. There is no accept/decline control.

| | |
|--------------|---|
| CONSOLE | n/a |
| NETWORK | third-party pixels (quantserve, sitescout, basis, retargetly, doubleclick) fire on load |
| LIKELY CAUSE | Tags loaded unconditionally in the Webflow head. |
| CHECK ROWS | 1 failing row in all_checks.csv (C1273) |

Re-verified • 2026-09-27 01:17 PM PT: Before pressing YES (age gate still showing: True): 14 cookies set, 10 of them from ad-tech domains ['crwdcntrl.net', 'doubleclick.net', 'exelator.com', 'quantserve.com', 'sitescout.com']. The notice says 'we never collect any personal data'. There is no accept/decline choice.

Prop 65 warning link is black on black at checkout

| | |
|--------------------|--|
| URL | https://www.thecurecompany.com/checkout |
| ENVIRONMENT | desktop 1366x900, Playwright Chromium; re-verified 2026-09-27 01:09 PM PT (still reproduces) |
| ELEMENT / SELECTOR | a[href*=p65warnings] |

STEPS TO REPRODUCE

- 1. Add a product and open /checkout.
- 2. Scroll to the WARNING text under Place Order.

EXPECTED

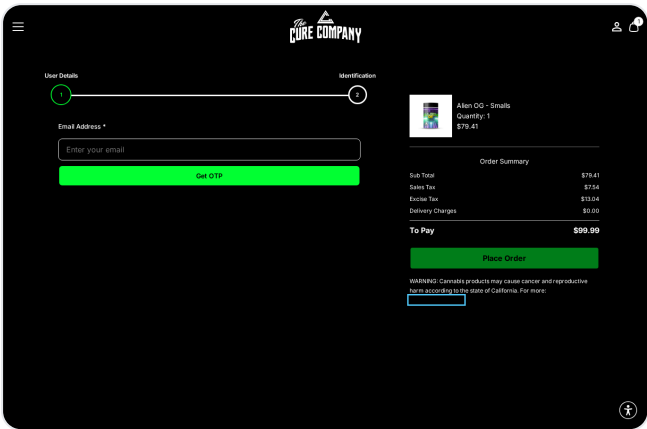

A visible link to www.P65Warnings.ca.gov.

ACTUAL

The link text colour is rgb(0, 0, 0) on a rgb(0, 0, 0) background, so it is invisible.

| | |
|--------------|--|
| CONSOLE | n/a |
| NETWORK | n/a |
| LIKELY CAUSE | Default link colour inside a dark section. |
| CHECK ROWS | 1 failing row in all_checks.csv (C1268) |

Re-verified · 2026-09-27 01:09 PM PT: Checkout Prop 65 link "p65warnings.ca.gov": text colour rgb(0, 0, 0) on background rgb(0, 0, 0) (link outlined in blue in the screenshot).

Account emails: wrong sender domain, test assets, confusing subject and order

| | |
|--------------------|--|
| URL | emails in the test inbox |
| ENVIRONMENT | mail.tm API; re-verified 2026-09-27 01:07 PM PT (still reproduces) |
| ELEMENT / SELECTOR | email templates |

- STEPS TO REPRODUCE
1. Sign up; read the emails received.

EXPECTED

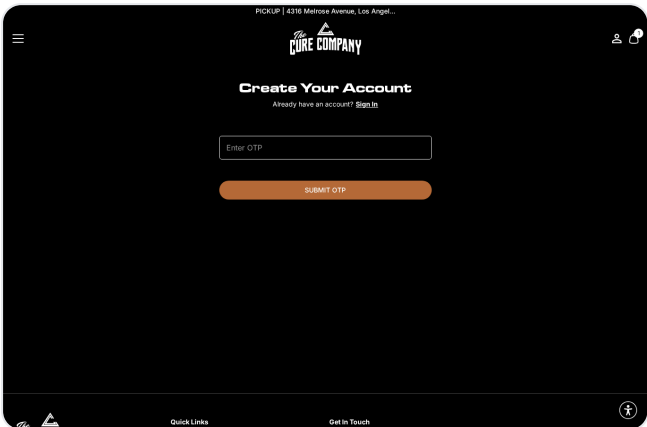

Sender on the site's domain; a sign-up code subject that says sign-up; the welcome email after verification; production image assets.

ACTUAL

All emails come from info@curecompany.com (the site is thecurecompany.com). The sign-up code subject is "The Cure Company: one time code to login". "Welcome to The Cure Company" arrived at the same second as the first code, before verification. Images load from a Cloudinary ".../test/" folder.

| | |
|--------------|---|
| CONSOLE | n/a |
| NETWORK | n/a |
| LIKELY CAUSE | Templates copied from a test tenant; sender not configured. |
| CHECK ROWS | 1 failing row in all_checks.csv (C1266) |

Re-verified • 2026-09-27 01:07 PM PT: Test inbox: sender(s) ['info@curecompany.com'] (site domain is thecurecompany.com); subjects {'Request to reset password for The Cure Company': 2, 'The Cure Company: one time code to login': 2, 'Welcome to The Cure Company': 1}; sign-up code email subject says 'one time code to login'; welcome email arrived at the same second as the first code (2026-09-27 12:31 PM PT), i.e. before verification; latest email loads images from a Cloudinary '/test/' folder: True.

Controls built from divs and unlabelled text

| | |
|--------------------|--|
| URL | https://www.thecurecompany.com/ (age gate), /category?name=flower (mobile filters), /signup |
| ENVIRONMENT | desktop and mobile 390x844, Playwright Chromium; re-verified 2026-09-27 01:17 PM PT (still reproduces) |
| ELEMENT / SELECTOR | #over-age; .filter-value-mobile span; signup inputs |

STEPS TO REPRODUCE

- 1. Inspect the age gate YES/NO.
- 2. On mobile open filters and tap the word "Indica".
- 3. Look at the sign-up form labels.

EXPECTED

Real buttons; `<label>` around checkbox text; visible field labels.

ACTUAL

YES/NO are `<div id="over-age">` / `<div id="under-age">`. The "I agree to T&C" line has no checkbox. Mobile filter text has `cursor:pointer` but tapping it does not tick the box (results stay 167; tapping the box gives 81). Sign-up fields use placeholders only. "Passwords do not match" appears twice. Bag +/- are unlabeled divs.

| | |
|--------------|---|
| CONSOLE | n/a |
| NETWORK | n/a |
| LIKELY CAUSE | Webflow divs with click handlers. |
| CHECK ROWS | 2 failing rows in all_checks.csv (C1211, C1283) |

Re-verified • 2026-09-27 01:17 PM PT: Mobile 390x844 /category?name=flower filter panel: the text 'Indica' is a SPAN with `cursor:pointer`, inside a `<label>`: False; after tapping it the Indica checkbox is checked: [False]. Age gate YES is a DIV, not a button; the gate has no checkbox: True; Tab reaches YES: False.

Script errors after login (bag sync and order summary)

URL

https://www.thecurecompany.com/checkout

ENVIRONMENT desktop 1366x900, Playwright Chromium; re-verified 2026-09-27 01:14 PM PT (still reproduces)

ELEMENT / SELECTOR checkout.js, global.js

STEPS TO REPRODUCE

- 1. As a guest, choose a store and add a product.
- 2. Log in and open /checkout; watch the console.

EXPECTED

No errors.

ACTUAL

After login the console logs "Error syncing bag: TypeError: Cannot read properties of undefined (reading 'totalItemsInCart')" (global.js:3930) and "Cannot set properties of null (setting 'textContent') at updateOrderSummary" (checkout.js:4259); /profile logs "Tiers container not found". Two errors seen on an empty checkout during J17 (12:36 PM PT) did not come back at re-check (empty guest /checkout, 0 errors at 1:14 PM PT), so that part has been dropped.

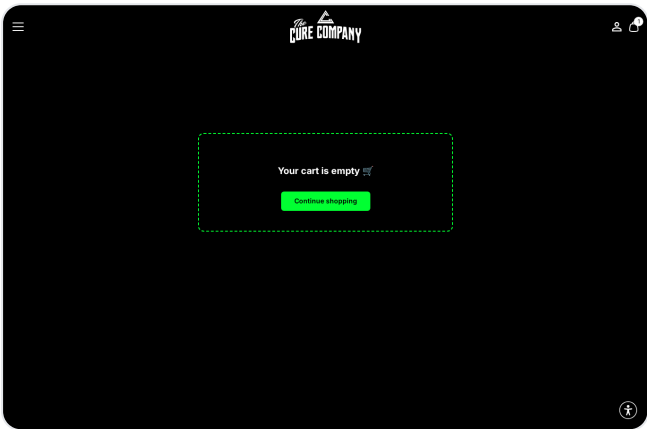

CONSOLE Error syncing bag: TypeError ... totalItemsInCart (global.js:3930:21) ; TypeError: Cannot set properties of null (setting 'textContent') at updateOrderSummary (checkout.js:4259:59)

NETWORK n/a

LIKELY CAUSE Missing null checks in the plugin scripts.

CHECK ROWS 1 failing row in all_checks.csv (C1272)

Re-verified • 2026-09-27 01:14 PM PT: Console errors right after login: ["Error syncing bag: TypeError: Cannot read properties of undefined (reading 'totalItemsInCart')"]. Empty guest /checkout logged 0 errors at re-check.

82 visible images have no alt text

URL /shop, /locations/*, footer on every page

ENVIRONMENT crawl; re-verified 2026-09-27 01:17 PM PT (still reproduces)

ELEMENT / SELECTOR .product_card_image, .static_locations_thumbnail, .footer_icon, .footer_logo

STEPS TO REPRODUCE

1. Inspect product card images on /shop and location thumbnails.

EXPECTED

Meaningful alt text (product name, store name, social network).

ACTUAL

82 of 1111 visible non-decorative images lack alt: 67 /shop product cards, 10 location thumbnails, 4 footer social icons, 1 footer logo. At re-check (1:18 PM PT) all 120 visible /shop card images had no alt. The UserWay overlay is installed but did not add alt text to these.

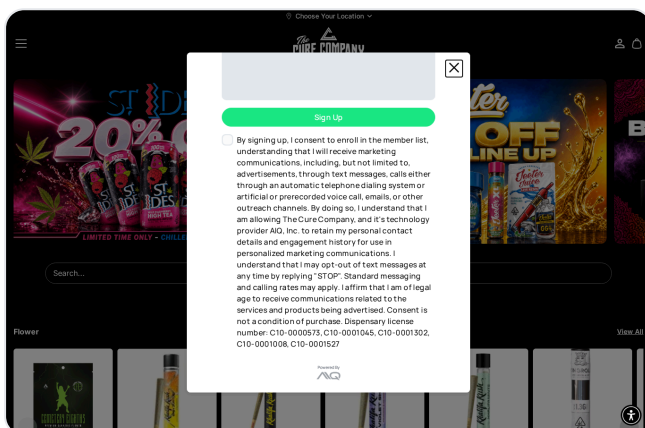

CONSOLE n/a

NETWORK n/a

LIKELY CAUSE productCard.js renders `<img>` without alt; static images left blank in Webflow.

CHECK ROWS 6 failing rows in all_checks.csv (C0119, C0133, C0147, C0154, C0738, C1275)

Re-verified · 2026-09-27 01:17 PM PT: /shop: 120 of 120 visible product card images have no alt text. Crawl total: 82/1111 visible non-decorative images without alt (67 shop cards, 10 location thumbnails, 4 footer icons, 1 footer logo).

desktop_shop.png

07 Re-verification

Every issue was re-checked on the live site between 1:07 and 1:32 PM PT, after the first round of testing (12:18 PM to 1:07 PM PT). One row per issue is in `reverify.csv`, and one probe row per issue is in `all_checks.csv`.

| OUTCOME | ISSUES |
|----------------------------------|--|
| Still reproduces | 29: SEC-1 , H-1 , H-2 , H-3 , M-1 , M-2 , M-3 , M-4 , M-5 , M-6 , M-7 , M-8 , M-9 , M-10 , M-11 , M-12 , M-13 , M-14 , M-15 , L-1 , L-2 , L-3 , L-4 , L-5 , L-6 , L-7 , L-8 , L-9 , L-10 |
| Removed as incorrect | 0 |
| Fixed since first test (removed) | 0. H-1 (guest bag lost on login) looked fixed in one re-check at 1:12 PM PT, but two clean re-checks at 1:14 and 1:15 PM PT, with products not already in the account's saved bag, emptied the bag again. It stays. |
| Not rechecked (kept, marked) | 1: H-4 . It needs a new, unverified account, and sign-up requires a second phone number and code. The 12:32 PM PT video is the evidence. |

Details corrected during re-verification. These sub-claims changed but the issues stay: [L-8](#) now lists the 25 duplicated country codes found at re-check (the first pass listed 5). [L-9](#) no longer claims errors on an empty checkout, which did not come back. [M-4](#) gives the measured toast time (about 3 s, not 2 s). [M-5](#) notes that Place Order is disabled at step 1 and becomes enabled at step 2. [M-15](#) gives both cookie counts (11 and 14).

08 Not tested

| ITEM | REASON |
|--|---|
| Place Order, payment, order confirmation page and email | Hard rule: Place Order is never clicked (a real pickup order would be created). No test card. |
| Uploading a Government ID or Patient ID at checkout step 2 | Would need real ID documents. |
| A real promo code | None was provided; only the made-up QATEST123 was used to test error handling. |
| | |

| ITEM | REASON |
|---|--|
| VIP / newsletter signup submit (J20) | Needs a real mobile number, a drawn signature and SMS/autodial consent. Needs Vic. |
| Product variants (J08) | The site has no variant/size picker to test. |
| Contact form and wholesale form submit (incl. file upload) | Would send messages to the business; the wholesale file chooser was only opened. |
| Account deletion (/delete-account) | Would delete the test account. |
| Google sign-in | Would need a real Google account. |
| Phone login, SMS codes | No real phone; email codes were used. |
| Earning or redeeming loyalty points | Needs a completed order; the loyalty UI is not shown (H-3). |
| 12 external links (Weedmaps, Yelp, Facebook) | They return 400/403/406 to automated clients (bot protection). |
| 894 lazy images | Never scrolled into view during the crawl. |
| 8494 of 8554 product pages | 60 sampled; 10 of the 98 "#" URLs sampled. |
| Re-verification of H-4 (unverified-login message) | Needs a second, unverified account with another phone number. Kept, backed by video. |
| Safari, Firefox, real iOS/Android devices | Chromium only (desktop and 390x844 emulation). |
| Accessibility beyond alt text, contrast spot-checks and control semantics (screen reader, keyboard order) | Out of scope for this run. |

09 Method & files

- **all_checks.csv**: crawl, button, link, price, journey and re-verification probe rows in one schema, with severity and issue_id on every failure.
- **reverify.csv**: one row per issue with verdict, evidence and time (PT).
- **journeys.csv**: one row per customer journey.

- Place Order was never clicked and nothing was paid. No messages were sent to the store. Only links in the test inbox were opened.
- Videos are H.264 MP4 (faststart). Secrets (tokens, passwords, API keys) and the test inbox address are blacked out in screenshots and videos and redacted in text.
